

# INMAGIC® DB/Text® *Library Suite*

## A Complete Information Management Solution

**The Inmagic® DB/Text® *Library Suite* is designed to meet the changing needs of information centers managing a single catalog that covers multiple collections of both traditional and nontraditional library materials.**

To further address these changing needs, Inmagic® *Genie*, our Web-based integrated library system (ILS), has been integrated with our flexible information management tools; Inmagic® DB/Text® *Web Publisher Pro* and Inmagic® DB/Text® *Works*. This new product suite delivers a powerful, flexible, Web-based ILS enabling the organized sharing of information within and across workgroups which can increase efficiency, improve performance, and add to the bottom line.

Information centers have changed dramatically over the last few years. Funding and staffing levels have dropped, yet expectations and requirements from end users have increased. The regular use of the Web as a research tool has permanently changed the way end users interact with information. Your end users have information requirements that go well beyond the bounds of a standard ILS. Requirements can include access to images, unstructured documents (e.g. Word, PDF, Excel), URLs, images, audio and video files, in addition to traditional library materials such as books and serials. *Library Suite* allows management of all these types of information within the library catalog, including full-text indexing.

### Meeting the Requirements for Library Management

Anchored by *Genie*, Inmagic's *Library Suite* builds upon our twenty-five years of experience in developing library automation systems. *Library Suite* provides back office functions via a Web browser, minimizing the need for library staff members to have access to a Windows application on individual desktops. In addition, library staff can work at remote locations outside the office or during irregular hours.

Because *Library Suite's* capabilities enable your end users to be increasingly self-reliant, less time is spent on clerical and administrative duties and more time can be focused on gaining value from your information center.

### Extending Your Library

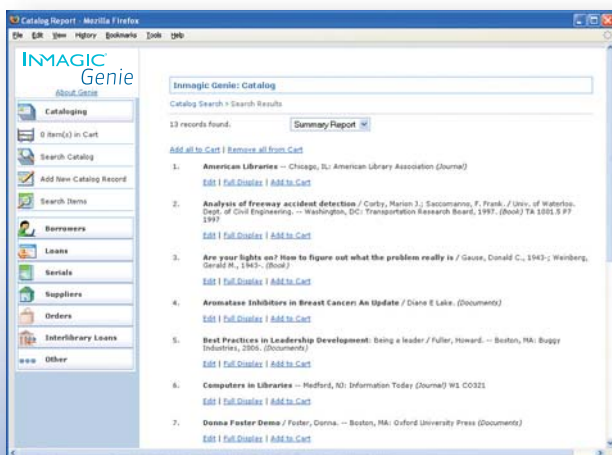

The comprehensive library automation capabilities of *Library Suite* are further extended through its integration with our successful Web publishing and database retrieval tools; *DB/Text Web Publisher Pro* and *DB/Text Works* for Windows. *Library Suite* includes:

- **Inmagic® *Genie***: a Web-based ILS
- **DB/Text® *Web Publisher Pro***: an interactive Web publishing and access system which enables users to deploy, publish and maintain textbases on the Web quickly and easily
- **DB/Text® *Works for Windows***: a special combination of database and text retrieval software that enables you to build networked and standalone textbases to manage diverse types of information including documents, images, and multimedia.

### Providing Self-Service for End Users:

Through a single interface, end users can:

- Retrieve information 24/7 via the Web
- Conduct powerful OPAC searches by keyword, author, title and subject — and by fields configured to meet your organization's specific needs
- Browse the catalog using Inmagic's "browse index" technology
- Use the InfoCart to store items for later retrieval and action
- Log into "My OPAC" to view their open loans, overdues, reserves, routed serials and borrower information
- Perform Self-Checkout

## Socializing Your Library

Inmagic *Library Suite* can also serve as a logical next step toward socializing your library applications by utilizing the power of Inmagic® *Presto*. Inmagic® *Presto* is a true social knowledge management platform designed to manage large volumes of diverse content as well as social content and can serve as the foundation of your overall social knowledge network strategy. A social library is an integrated collection of traditional information and the knowledge found within the "wisdom of the community." Various social media platforms, such as blogs, wikis, online ratings, discussions, and social tags, tap into an organization's collective wisdom. When integrated, the captured wisdom augments and enhances the traditional information, providing opportunities for organizations to attain new insights. *Library Suite* and current Genie customers can easily migrate their library to *Presto* to take advantage of *Presto's* rich content management, search, discovery and social knowledge management capabilities.

## Reducing Your Reliance on IT

*Library Suite's* unmatched flexibility and configurability requires minimal support from your IT organization. *Library Suite* can conform to each library's unique needs, information resources and workflow. *Library Suite* is an open system, with an XML API. In addition, you can export all of your data at any time in various formats including XML, and you have the ability to share your records with other libraries in MARC format. *Library Suite* utilizes Web services that enable the information center to interoperate within your organization's overall IT architecture.

## Ensuring Your Success

To ensure you receive the greatest possible value from all of our products, Inmagic provides comprehensive implementation services through our Professional Services Group and a network of certified value-added partners around the world.

Inmagic offers numerous ways to purchase and deploy *Library Suite* including perpetual or subscription licensing and on-premises or hosted deployments. Our managed hosting options provide the stable yet flexible foundation needed for cost-effective deployment of your information management system, ILS or broader social knowledge network. For the thousands of organizations currently using Inmagic® DB/Text® products, upgrading to *Library Suite* is extremely cost effective and straightforward. As an aid to migration, Inmagic and its Partners will work with you to automate much of the work involved in moving your data, forms, reports and Web interface.

## Library Suite's Web-Based ILS Application Allows You To:

- Check your fully-configurable librarian's dashboard for an up-to-date view of critical library items, then act directly on those items
- Catalog your materials, including the ability to use BookWhere™ to easily find, download, and import bibliographic records
- Edit existing materials
- Add and edit borrower records
- Maintain loan, circulation and waitlist information
- Perform serials management
- Maintain order and supplier information
- Make interlibrary loans and acquisitions
- Offer localization with a French bilingual option
